How does 'poll' work?

Agent - 2024-09-17 - [EPP messages](#)

Executing EPP commands will normaly not result in any pending actions. However, the Registry may initiate certain actions that will trigger a message to be sent to the registrar, and all registrars are expected to regularly <poll/> all their messages to stay updated.

Please note that only the first message in the queue can be polled with EPP. This means that polling can only be performed by a single thread, and all messages must be acknowledged.
