How can I check if a domain name is free or not?

Agent - 2022-07-06 - New registration of domains

If you want to check if a .se or .nu domain name is free or not, you can use the Free service.

The free service is available here: <http://free.iis.se/>

The service responds with "free" if the domain is free and "occupied" if the domain is already registered. Here is an example, <http://free.iis.se/free?q=example.se>
