Support Portal | Registry Services

Will Registry Services offer registrars the option of synchronizing their system with Registry Services system?

Agent - 2026-10-06 - Miscellaneous tech

The system does not have any specific function for synchronization. However, domain names for which you are registrar are listed in your account on the registrars' website. The list of domain names can be exported in a file. Please note that this list is generated once every 24 hours.

The domain list can also be retrieved via the Registrar API provided by Registry Services: https://api.registry.se/docs/index.html.
