When is it possible to see the release date for a domain name?

Agent - 2021-08-06 - Release of domains

When a domain name is deactivated, it is given a *deletion date* and a *release date*. The domain name and the release date are also included at the same time on a list of domain names that is available on The Swedish Internet Foundations website. (The release date must not be confused with the *deletion date*, since these are different matters.)
