When is a message sent about the change of a contact ID?

Agent - 2024-10-31 - EPP messages

The new registrar will not get a specific message about the change of a contact ID. However, the registrar will get a message when a new contact has been created and that a change of registrar has occurred.

When changing registrars, the registrant's contact information is copied and a new, identical contact is created. Since a new contact is created in conjunction with the change, the new contact is thus also assigned a *new contact ID*.
