What is Automated DNSSEC?

Agent - 2023-07-05 - Automated DNSSEC

The service introduces an automated administration of DNSSEC keys via so-called CDS records. The technology allows the holder of a .se or .nu domain to automate updates to the DNSSEC configuration, for example, when changing signing keys or changing registrars.

Who is the service for?
It primarily aims at DNS operators who provide DNS services for businesses and individuals. Registrars can also use the service, but for them, it is normally easier to carry out the desired updates via EPP.
