What happens to a previously requested deregistration in the event of a change of registrar?

Agent - 2026-10-09 - Deregistration of domains

If the domain holder has requested to deregister the domain name and then *change registrars* during the *deactivation period*, the earlier deregistration request will be cancelled. (In EPP, the parameter *ClientDelete* will be set to "0" and the set *ClienDeleteDate* as well as the *ClientDeactivationDate* are removed.)

If the domain holder wants to deregister the domain name this has to be requested again under the *new* registrar. This way, the current registrar will also have the basis for the deregistration.
