Who creates a Contact ID, Registry Services or the registrar?

Agent - 2022-07-01 - Miscellaneous tech

The registrar personally does this via EPP by entering the command “create contact.” The EPP guide *EPP Rules Policies and Protocol description .se .nu* includes information on the recommended format.

However, when it comes to *changing registrar*, Registry Services will create the Contact ID and does that by copying the information in the existing contact to create the new contact/contact:id.
